

BLUE CHIP SIGNALS

Due Diligence and Service Overview

Premium Algorithmic Options Alerts for Disciplined Traders

Confidential. For Prospective Member Review.

This document is provided for informational purposes only. It does not constitute financial advice, investment advice, or a recommendation to purchase any security or service. See Risk Disclosure section for important disclosures.

01 EXECUTIVE SUMMARY

Overview

Blue Chip Signals is a premium algorithmic options alert service designed for self-directed traders who seek structure, clarity, and discipline. The service delivers real-time trade alert ideas on highly liquid large-cap options (SPY, TSLA, META, NVDA, AAPL, and AMZN) directly to members via Telegram.

Each alert includes defined entry context, contract specifications (strike, premium, volume, expiration), momentum data, and a supporting chart. The service is positioned as a decision-support tool, not as financial advice, managed trading, or a guarantee of outcomes.

02 LEADERSHIP

The Founder

Hamza Hanifi | Founder and Architect

An athlete at heart with a will to win, Hamza was first introduced to investing at 17 when his high school history teacher ran a paper trading competition. He placed 6th. That didn't sit well with him. What started as a competitive itch became a 10+ year journey into the underlying mechanics of the market.

A year later, he discovered options trading. After losing over \$20,000 and watching his long-term portfolio underperform, he realized the problem wasn't the market. It was time, leverage, and the absence of a system. Between work and college, he couldn't sit and watch charts all day. So he dropped out and taught himself to code.

Two years later, the first version of Blue Chip Signals was built. After friends and family pushed him to productize it, he spent the next several years refining the signal logic with real traders in mind. Every signal, every feature, and every line of code traces back to one person: the student athlete turned self-taught coder and trader.

03 SERVICE

Service Overview

Members receive real-time options trade alert ideas via Telegram. Each alert follows a structured, standardized format:

Component	Description
Ticker	Underlying large-cap equity (e.g., SPY, TSLA, NVDA)
Market Data	Current price, VWAP, and Money Flow Index readings

Direction	Call or put positioning
Contract	Specific strike price, premium, volume, and expiration
Chart	Branded 10-minute chart with VWAP bands and MFI

Live alert: AMZN Call Reversal Bounce Signal delivered via Telegram

04 MARKET FOCUS

Ticker Coverage and Liquidity

Core Tickers: SPY, TSLA, META, NVDA, AAPL, AMZN, with selective inclusion of other qualifying names based on liquidity and volume thresholds. Restricting coverage to names with deep options volume aims to reduce slippage risk and improve execution efficiency. Thinly traded chains, penny stocks, and micro-cap names are excluded entirely.

05 DELIVERY

How Alerts Reach You

All alerts are delivered in real time via a private Telegram channel. Members receive a push notification the moment an alert is published. Each alert is formatted consistently so members can evaluate the setup and make a decision in seconds.

06 PHILOSOPHY

Operating Principles

Clarity Over Volume. Fewer, well-structured alerts take precedence over channel activity.

Discipline Over Hype. Communication is direct, measured, and free from promotional language or urgency tactics.

Transparency Over Performance Theater. Where audited track records do not yet exist, that is acknowledged openly.

Structure Over Ambiguity. Every alert follows a defined format. Every member receives the same information at the same time.

Risk Awareness Over False Confidence. Risk framing is built into every alert. No signal service can eliminate trading risk.

07 METHODOLOGY

How We Track Alert Outcomes

Every alert is logged at the time of publication with a timestamp, entry price, and contract details. We track whether the suggested contract reached a predefined profit target or hit a loss threshold within the relevant timeframe. We do not retroactively edit alerts or selectively report winners. The log is cumulative.

We do not guarantee that members executed at the published price. Slippage, timing, and individual execution vary. Our tracking reflects the alert as published, not any individual member's results.

08 RISK FRAMEWORK

Trader Responsibility

Options trading involves substantial financial risk, including the potential for total loss of invested capital. Blue Chip Signals does not guarantee profitability. Members should only trade with capital they can afford to lose. Blue Chip Signals is not a registered investment adviser, broker-dealer, or financial planner.

This risk disclosure is a working draft and has not been reviewed by legal counsel.

Blue Chip Signals operates from the United States. This service is not intended for residents of jurisdictions where options trading or the provision of trade alert services is restricted or prohibited.

09 AUDIENCE

Who the Service Is Designed For

- Active or semi-active traders with brokerage accounts approved for options trading.
- Traders with a functional understanding of options contracts.
- Individuals who want structured, clearly formatted trade ideas on liquid large-cap names.
- People who value premium service quality and are prepared to invest in a higher-tier signal experience.

10 TRUST

An Honest Assessment

Trust is earned, not declared. Our public footprint is growing intentionally, and we prioritize service quality over marketing volume. We earn trust through direct communication, a demo call process, consistent alert delivery, and a refusal to fabricate testimonials or inflate credentials.

11 REFUND POLICY

What Qualifies and What Does Not

Refund requests are evaluated on a case-by-case basis. If you experience a verifiable service disruption (e.g., no alerts received during your first week due to a backend issue on our end), that may constitute a justifiable reason for a refund. However, dissatisfaction with the content, frequency, or outcome of alerts does not constitute grounds for a refund. For the complete refund and cancellation policy, visit bluechipsignals.online/legal.

12 FAQ

Due Diligence Questions

How does Blue Chip Signals justify its price point?

The subscription reflects proprietary algorithmic infrastructure, exclusive large-cap focus, structured alert formatting, and a premium service experience.

Where can I find independent due diligence?

This document and bluechipsignals.online are the primary resources. Book a demo call with the founder for direct evaluation.

Are there verified member reviews?

Review infrastructure is being established. We are building social proof authentically rather than purchasing or fabricating it.

What happens if I experience losses?

Options trading involves real financial risk including total loss of capital. Every trade is your own decision. See the Risk Framework section.

Does this constitute financial advice?

No. Blue Chip Signals provides algorithmic trade alert ideas for informational purposes only.

Can I evaluate before subscribing?

Yes. Book a demo call where the founder walks you through the platform, alert format, and strategy framework.
